

See every machine. Know every dollar.

A palm-sized gateway speaks to your PLCs and the machines with no controller at all. By the end of the afternoon your floor has live OEE, wallboards, andon, and an AI that starts finding the dollars.

\$19,945 /wk

setpoint scrap difference, found & priced

45 sec

early warning found on an unwired tag

\$2,744 /wk

changeover tax, measured

1 afternoon

unboxing to live wallboards

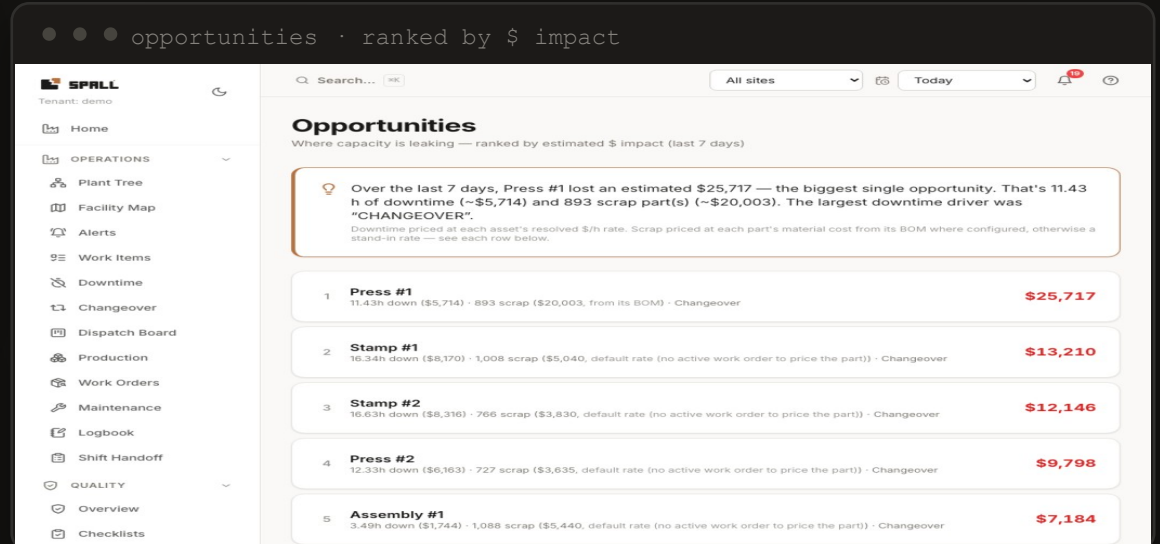

Illustrative: from our own bench/demo data.

Both, natively: one gateway

19 protocols across 8 families (Haas, Mazak, Okuma, DMG MORI, FANUC, Siemens, Allen-Bradley + more) AND direct clamp/analog sensing for no-controller machines. Own cellular path, metal-proven failover.

No black box on your floor

Read-only. Outbound-only. No remote-login service, period. No VPN required. Support is diagnostics, a physical-consent dongle, or a swap.

Pilot

\$4.5k / \$8.5k

Plant, Connected

\$200 → \$160/mo

Plant, Sensed

\$125/mo flat

Plant minimum

\$750/mo

Enterprise

from \$65k/yr

Every deployment starts with a pilot: 30 days, hardware included, fully credited when you continue. · spall.cc
